ABSTRACT:

Prepn. for cosmetic, pharmaceutical and biotechnology use containing the amino acid sequence Gly-His-Lys and/or Gly-Asp-Ser as tripeptides and or partial peptide sequence in concns. of 10 power (-12) to 10 power (-2) mol/l. The prepn. may be obtd. after a mild hydrolysis of, e.g, collagen, gelatine, elastin, keratin or connective tissue in 0.5-6.ON-HCl, 0.1 h up to 7 days at temps. between 20 deg. C to 121 deg. C and contain peptides and amino acids in concns. of 10 power (-12) to 1 mol/l. Pref., the prepn. also contains agents occurring in the skin and the connective tissues which enhance its effects, e.g, saccharides, polysaccharides, fibronectin, cytokines in concns. of 10 power (-12) to 2 mol/l.

BASIC-ABSTRACT:

Prepn. for cosmetic, pharmaceutical and biotechnology use containing the amino acid sequence Gly-His-Lys and/or Gly-Asp-Ser as tripeptides and or partial peptide sequence in concns. of 10 power (-12) to 10 power (-2) mol/l.

The prepn. may be obtd. after a mild hydrolysis of, e.g, collagen, gelatine, elastin, keratin or connective tissue in 0.5-6.ON-HCl, 0.1 h up to 7 days at temps. between 20 deg. C to 121 deg. C and contain peptides and amino acids in concns. of 10 power (-12) to 1 mol/l. Pref., the prepn. also contains agents occurring in the skin and the connective tissues which enhance its effects, e.g, saccharides, polysaccharides, fibronectin, cytokines in concns. of 10 power (-12) to 2 mol/l.

USE/ADVANTAGE - The new peptides are useful in biotechnology (e.g., additives for serum-free cell culture media), medicine (as wound healing agents, for immuno-stimulation and increase in erythropoietin formation) and in cosmetics (as anti-ageing-factor). The peptide and amino acid mixts. obtd. by partial hydrolysis under defined hydrolysatation conditions have new characteristics which are different from those of the starting materials and pref. relate to an increase in cell metabolism, stimulation of collagen synthesis and/or radical scavenging (claimed).

CHOSEN-DRAWING: Dwg.0/6

TITLE-TERMS: PEPTIDE PREPARATION CONTAIN TRI PEPTIDE OBTAIN AFTER MILD HYDROLYSIS

ABSTRACT:

Compsn. for cosmetic, pharmaceutical or biotechnical use contains the sequence Gly-His-Lys and/or Gly-Asp-Ser either as tripeptide and/or as part of longer peptides at a concn. of 1 picoM to 0.01M. Pref. the compsn. is prepd. by mild hydrolysis of collagen, (hydrolysed) gelatin, elastin, keratin, or connective tissue in 0.5-6N HCl for 0.1 hr. to 7 days at 20-121 deg. C and contains peptides and amino acids at 1 picoM to 1M. Alternatively it contains peptides produced by partial hydrolysis using collagenase from clostridium histolyticum. USE/ADVANTAGE - Compared to compspn. contg. non-hydrolysed material, this compsn. has better stimulating activity or cell respiration and collagen synthesis and/or better radical scavenging activity. Typical applications include (1) additive for cell growth media; (2) stimulation of healing and the immune system; (3) increasing endogeneous prodn. of erythropoietin; (4) for skin care, as anti-ageing factor and as radical scavenger.
